

ACTIVE DIRECTORY MANAGEMENT SOLUTION

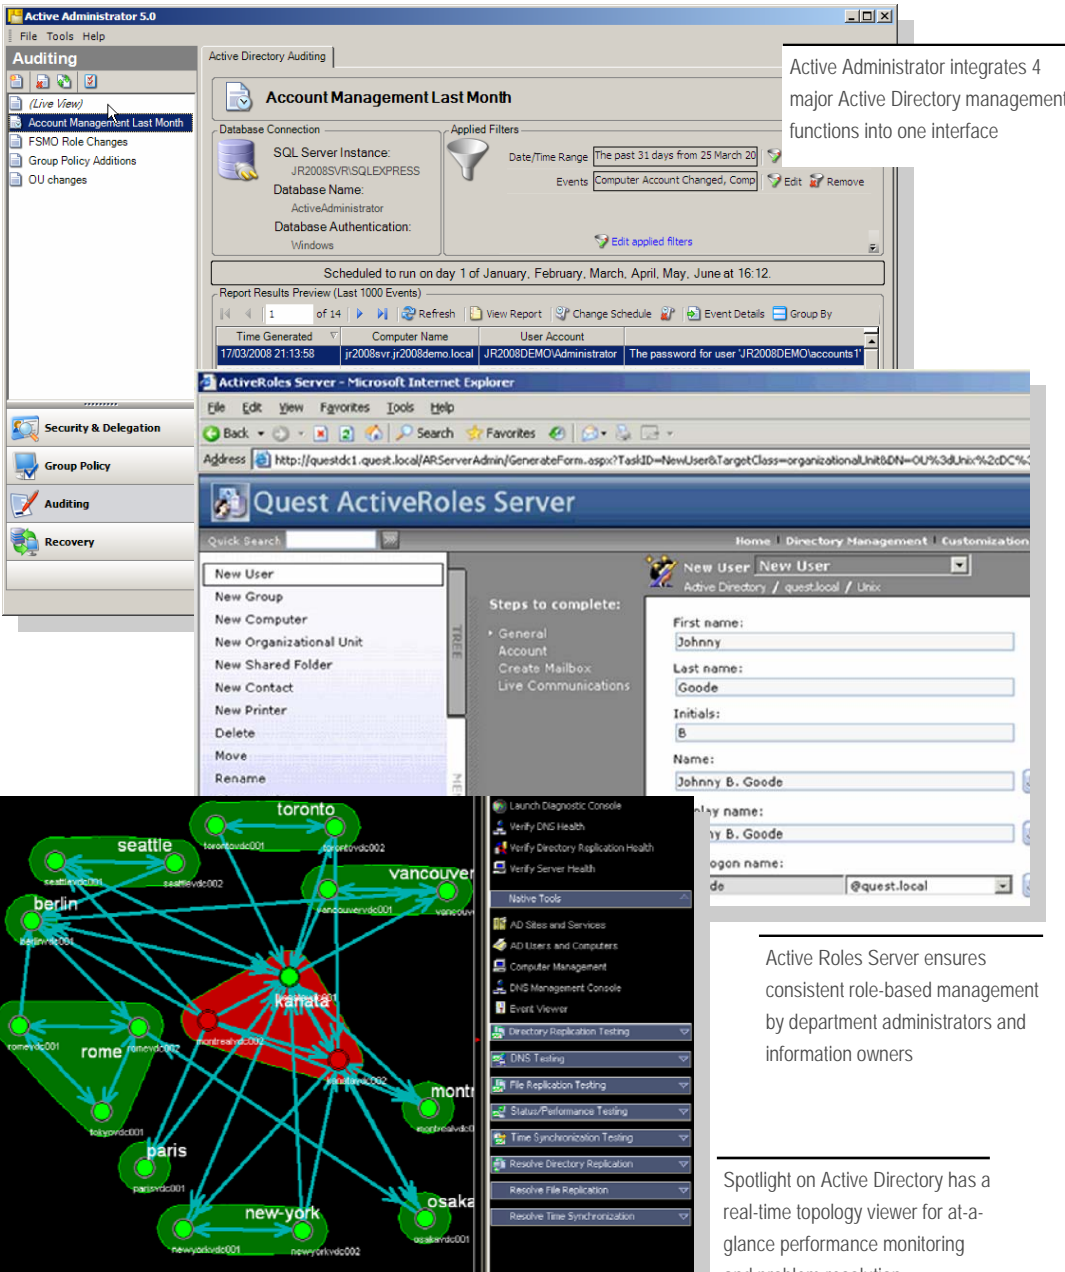

The **Active Directory Management Solution** is a comprehensive offering for tightening security, streamlining administration, easing compliance burdens and improving business continuity in organizations with Windows networks based around Active Directory.

While extremely powerful and flexible, Active Directory quickly becomes complex to manage in Windows networks of any size. ScriptLogic now offers Active Directory administrators our most complete solution ever, comprising of 3 complimentary products.

THE POWER OF THREE

Active Administrator gives the senior Active Directory administrator what they need to audit, backup, recover, secure and

increase resilience in their environment. With that under control, **Active Roles Server** gives users, department administrators and information owners task-specific interfaces for consistent, policy-based management with approval workflows. And to keep everything working smoothly, **Spotlight on Active Directory** monitors system health, optimizes performance and speeds troubleshooting.

Active Administrator integrates 4 major Active Directory management functions into one interface

Active Roles Server ensures consistent role-based management by department administrators and information owners

Spotlight on Active Directory has a real-time topology viewer for at-a-glance performance monitoring and problem resolution

KEY BENEFITS

Total Coverage

Comprehensive feature set covers each major area of AD administration, reducing costs and raising productivity in every case.

Security

Find those over-privileged users! Enforce security restrictions and reduce the attack surface area with role-based security and task-specific interfaces.

Compliance

Repeatable and consistent management of access controls, with extensive reporting and a comprehensive audit trail ease the task of reaching your compliance objectives.

Increase Productivity

Simplify daily administration tasks for senior and junior administrators, optimize the performance of AD and deliver greater uptime to your users.

KEY FEATURES

Auditing and Alerting

Centralized collection, reporting and alerting on all AD events from all Domain Controllers

Recovery

Instant recovery of users, computers, OUs, attributes, group memberships and more

Group Policy Management

Change history with rollback, advanced modeling (RSOP) and offline editing

Consistent Security Management

Tight restrictions and role-based delegation of responsibilities

User Provisioning/Deprovisioning

Simplified, rule-based creation and configuration of new users and groups

Approval Workflow

Total control of which changes, additions and deletions require approval

Health Monitoring

Proactive alerts and visual topology display of AD bottlenecks and performance

Troubleshooting Tools

Guided problem analysis and resolution, with tips and links to Knowledge Base articles
